Job Description

Designation: Web Applications Developer

Responsible to: Head of Product Development and Infrastructure

Salary: Dependent on skills and experience

Main Duties and Tasks (this is not an exhaustive list)

This position of **Web Applications Developer** is within the Development Team and reports to the Head of Product Development and Infrastructure. The postholder will take pride in the quality of their coding, documentation and unit testing and will be an advocate for compliance with web standards and **accessibility** guidelines.

Additionally, the postholder will, when required, assist the service desk and on-site delivery teams. This provides valued insight into the end user experience and environment and assists the company with ensuring excellent service delivery to clients.

Key tasks include:

- Taking on tasks around maintaining our codebase and developing new features.
- Being a proactive member of our scrum team, taking part in planning sessions, daily stand-ups and bi-weekly presentations to the wider company
- Working closely with our UX designers to produce great experiences, across platforms.
- Assist service desk with 2nd line support
- Liaise with clients as and when required

Skills

The role requires a range of skills, some of which are set out below:

- Traditional web development: PHP / MySQL / HTML / CSS
- React web application development: JavaScript (including JSX / react / jQuery)

Other desirable skills for this post also include:

- CodeIgniter PHP framework
- Testing tools (PHPUnit / Selenium)
- Composer / npm / Git

The post holder should have a working knowledge of best practice usability and Agile scrum/sprint and be able to document code and provide system documentation.

As in many small companies the work environment is dynamic and the ability to help as required is expected of all staff.

The company will assist in the event that training is required to ensure delivery of the role is enabled.
